

After receiving vaccines...

You have received one or more immunizations today: (circled)

Influenza – Injectable
Influenza – Nasal
Pneumococcal
Tetanus/Diphtheria
Tetanus/Diphtheria/Pertussis
Human Papillomavirus

Hepatitis A
Hepatitis B
Measles/Mumps/Rubella
Varicella (chickenpox)
Meningococcal
Zoster (shingles)

Sometimes the immunizations that protect you from serious diseases may also cause some discomfort. Reactions to vaccinations do occur, but serious reactions are rare. The more common reactions are redness, slight swelling and pain at the injection site and fever.

- If your arm becomes sore, you may want to apply ice or a cold pack to the injection area for 5–10 minutes at a time.
- Using or exercising the arm where the injection was given will distribute the medication quickly and decrease soreness.
- If you develop a fever greater than 100° F (38° C)
 - Please take a fever reducing medication as directed:
_____ for the next 24 hours.
 - Drink plenty of fluids.
 - Dress lightly.
